Fixes and features included in this release 2.2.0.27179

- 8974 - DR not showing a specific folder within SharePoint

Fixes and features included in this release 2.2.0.26883

- 8820 – Unable to connect to the Front End server by IP in environments with no DNS.
- 8819 - Restore "Use parent top link" setting for the elements of the top link bar.

Fixes and features included in this release 2.2.0.26373:

- 8510 – Unable to open the SQL database with outstanding transactions.
- 8533 – Fix to improve restore and enumeration of discussion objects
- 8537 – Improve connection port selection functionality in restore wizard.

Fixes and features included in this release 2.2.0.26088:

8459 – Addition of the DR Service user to a site breaks site's security roles inheritance.

Fixes and features included in this release 2.2.0.25749:

8263 – "Search content" checkbox has no effect if the index has not been initialized.

8264 – "Open" menu becomes disabled after making certain changes in configuration wizard.

Fixes and features included in this release 2.2.0.25461:

8116 – Excessive memory usage exhibited by a third-party UI control.

8075 – Excessive memory usage when opening Replay Recovery Points

8070 – DR unable to proceed if the settings.xml file is empty.

8000 – Recurring events show start time mismatch when restored.

7997 – Columns with non-default names are missing from the restored view.

7485 - Some hidden columns become visible after restoring a library view.

7805 – Intermittent error at the last step of the configuration wizard.

7990 – The "verifying connection" process in restore wizard cannot be cancelled.

7957 – Custom content types and custom fields are not restored.

7955 – The inability to create a display name for a field is not noted in the error log.

7931 – Additional Group Attributes are not restored.

7859 – Improve content type processing for more efficient restore for MOSS 2007 and SPS 2010.

7766 – The DR Service user should be added to the site collection before creating a sub-site.

Known Issues

- Windows Internal Database is not supported as the local database for DR console
- Sites and sub-sites templates (top and left-hand side navigation links and web parts) are restored as default templates for the type of site being restored.
- Web parts are currently not restored
- Deleted items if selected for restore are restored as undeleted
- Lookup fields are not restored

Keep in mind

- If your document is corrupted and you are building search index using DR, this document will be skip during search.
- There are some list presents in site that DR skipped during restore because they are undeletable. And if you are using "overwrite" option - these lists merged, if "skip" option they are just skipped
