

# AppAssure for Kaseya

Drive increased margins and provide advanced backup and recovery services for your customers – with minimal effort:

- Recover in minutes from any server failure
- Deliver local and offsite backup and recovery
- Provide offsite high availability and disaster recovery services
- Recover individual Exchange and SharePoint items or entire servers in minutes

When your customer’s application server goes down, you need it up and running fast.

## AppAssure Backup, Replication & Recovery Software for Kaseya

Lets you recover from any server failure to physical or virtual machines in minutes, backup and recover either locally or offsite, and provide offsite DR to customers with low bandwidth through integrated deduplication and replication.

AppAssure is now available as an integrated plug-in to the Kaseya management console, providing a single interface to install and monitor backups agents running across your entire customer base.

**Replay installation package version is 4.5.1.27695**

Use this page to deploy Replay Cores to the Kaseya managed machines. Provide the login credentials for the Replay Core service account and the Replay license file, then select the machines that you would like to deploy the Replay Cores to and click install.

Replay Core service account:  Password:

Port:  License:

**NOTE:**  
Verify that the Replay Core service has full Administrative rights on the target machine  
If the target machine is a member of a domain, use the format, 'DOMAIN\Username' or 'username@domain.com'.  
If the Replay Core is already installed on the target machine an upgrade is performed. Downgrading an installation to a previous version is not supported.

Select All / Unselect All	Machine	IP	Group Name	Replay Core Version	Managed by Admin
<input type="checkbox"/>	kseya	127.0.0.1	root.kserver	Not Installed	No

<input type="checkbox"/>	kaseya-test-4	10.23.3.102	root.mreplay-01	Not Installed	No
<input type="checkbox"/>	2k3e2-x86-x32-2	10.23.4.44	mreplay-01.root	Not Installed	No
<input type="checkbox"/>	kaseya-test-2	10.23.3.29	root.mreplay-01	Not Installed	No

## Unique Features:

- **Off-host processing** – lightweight agents push install to protected servers and workstations
- **Instant access during recovery** – enables users to access their application data *while it's being restored*
- **Integrated deduplication** and incremental forever for WAN optimization
- **Universal application portability** – including dissimilar P2P and P2V
- **Local and offsite backup and recovery** – for high availability and disaster recovery
- **Proactive application health checks** – shows you when SQL or Exchange database backups are corrupt, so you can anticipate failures in advance and quickly pinpoint problems
- **Granularity** to recover individual **Exchange or SharePoint** files – **and** total server recovery in minutes

*"With AppAssure, we don't have a full backup window anymore, we don't have bottlenecking issues anymore, and we don't have slower servers on the weekends anymore. We don't just feel as if we merely got a new utility. We now have a business partner in AppAssure who wants us to succeed and will continue to help us grow, adapting to our unique requirements to help us win new business."*

**Ted Garner, CEO**  
**IT Weapons, Inc.**  
**Ontario, Canada**

## Business Benefits for MSPs:

- **Increase profit margins** – resolve server issues in minutes, not hours
- **Expand business offerings** – integrated deduplication is WAN optimized for offsite recovery and high availability services
- **Improved customer satisfaction** – less potential data loss through incremental snapshots, plus live access immediately once a restore begins, means happier customers

## AppAssure Replication Options

Replicate your customers' mission critical data to any private offsite data center, or leverage one of AppAssure's Hosted Replication Services for turnkey offsite backup, disaster recovery and high availability.

### Private Data Center Replication

- Replicates backup snapshots to any offsite data center of your choosing
- Optimized for WAN replication through integrated backup deduplication
- Enables total disaster recovery and high availability through pushbutton virtual failover

### AppAssure Hosted Replication

- Replicates backup snapshots to secure, SAS 70 data center with redundant power
- Provides total disaster recovery and high availability through pushbutton virtual failover
- Affordable, turnkey service with no hardware or additional software purchase requirements
